

WeRateDogs Insights

WeRateDogs is a twitter account that rates people's dogs with humorous sense. the rating system is always more than 1 like 13/10, 15/10 ["because they're good dogs Brent"](#)

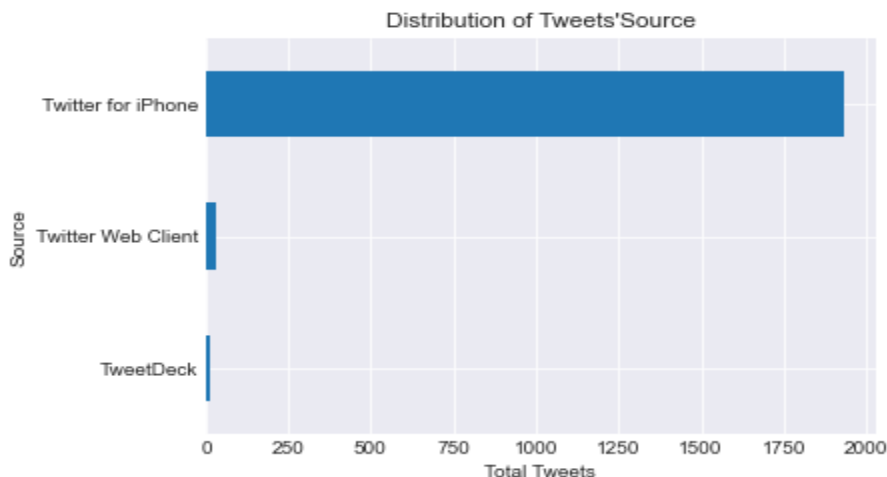

In this report I will be analyzing this data in master_dataset.csv visually and giving you some fun facts about this account and it's tweets.

Retweets – Favorites.

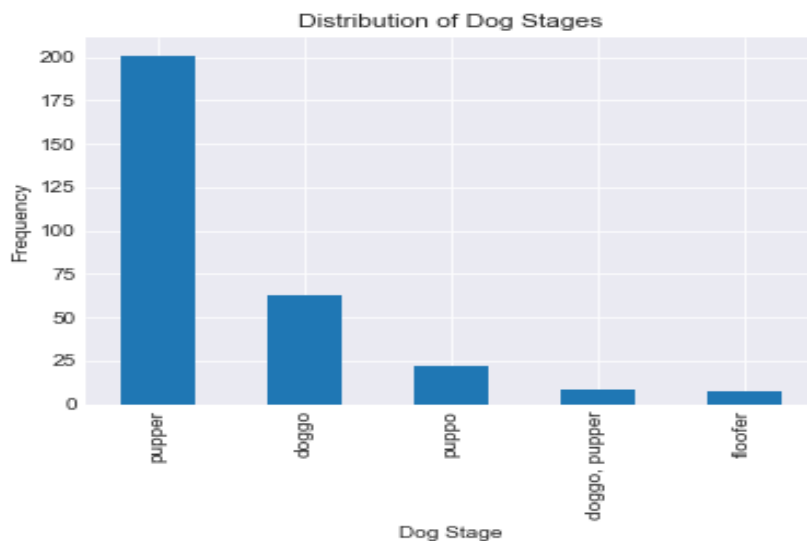

This scatter plot shows us that the retweet is highly correlated with favorites (likes) so as the more retweets happen the more likes the photo gets

Source of photo sharing

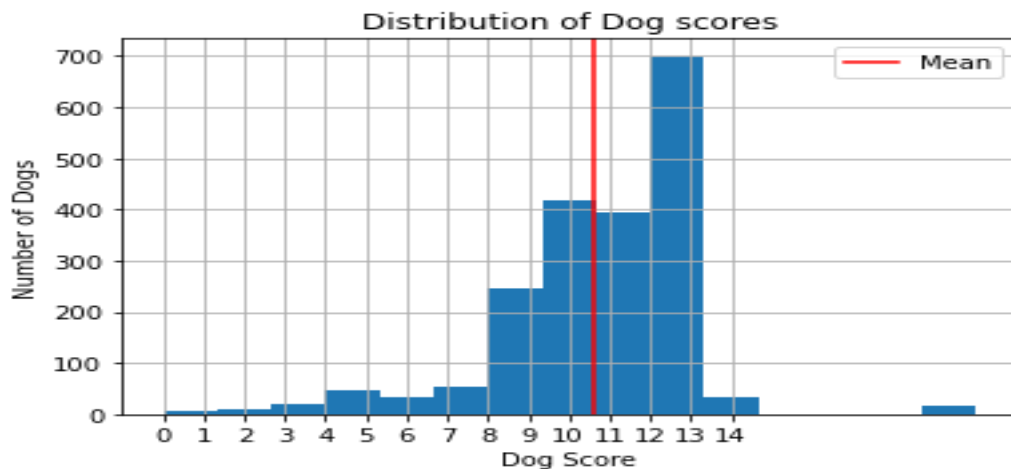

This bar chart shows us that the majority of people sharing their dogs photos with WeRateDogs account are actually using Twitter for iPhone which leads us that they take instantaneous photos of their dog, the good photo quality of camera and the ease of doing this through phone

Most Common dog stages

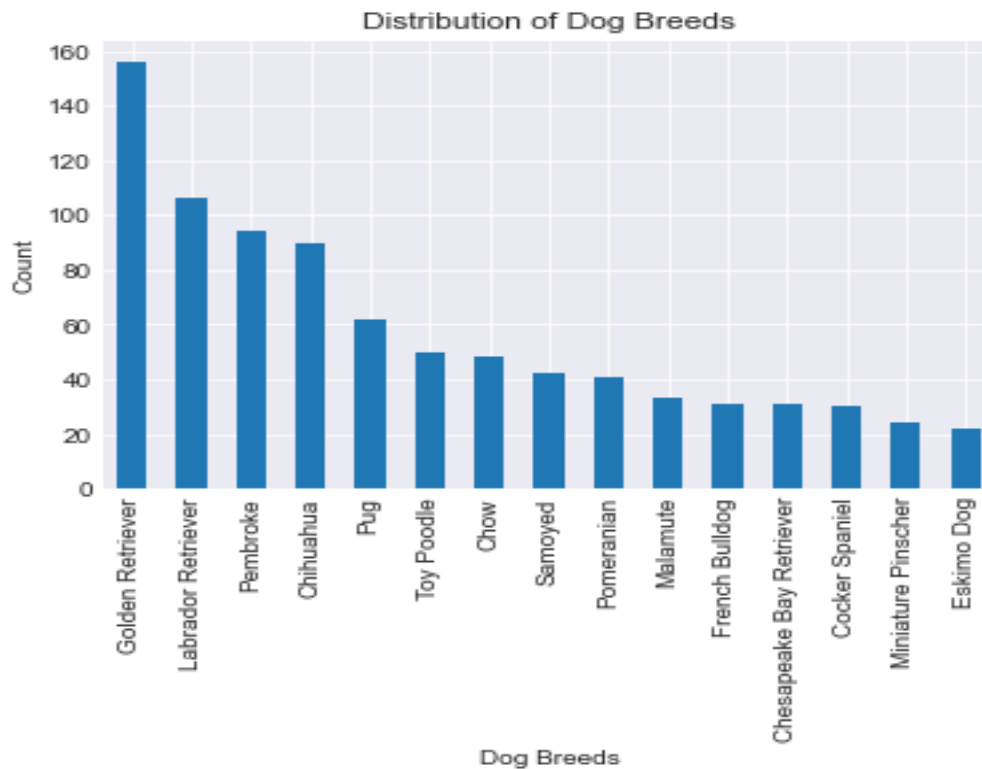

Dog stages is a classification produced by that account for dogs that each classification shows some of the dogs' properties

Number of dogs for each dog rate value

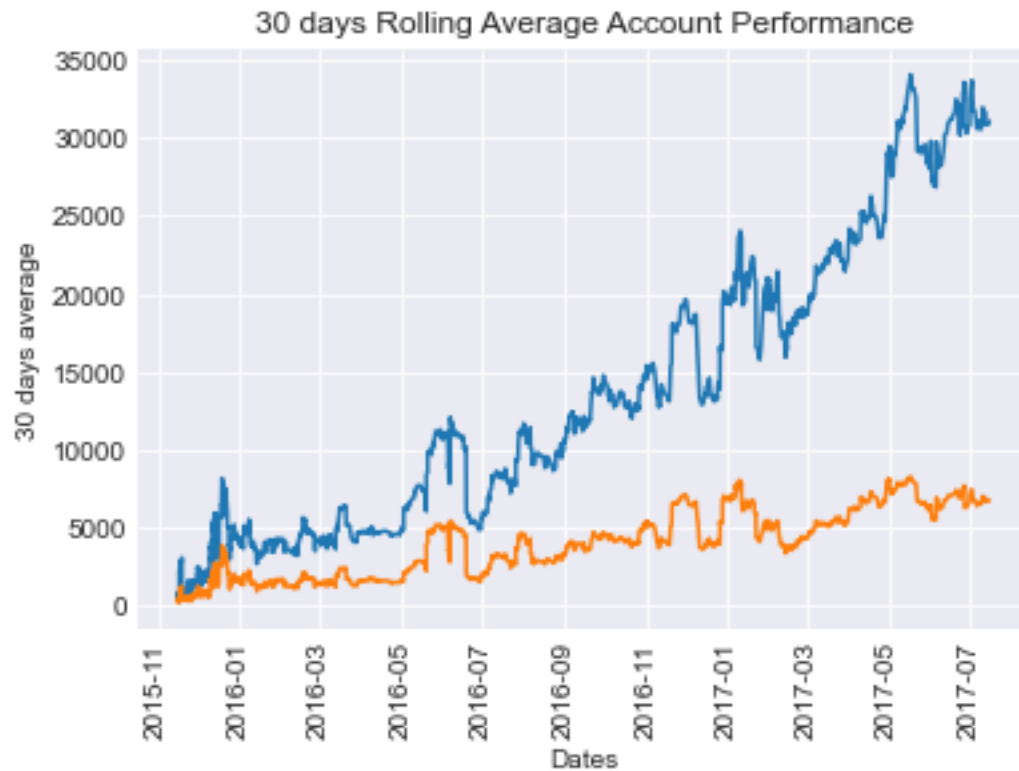

This chart helps you with the unique rating system of WeRateDogs account which indicates that almost 700 dogs were rated as 13/10 while the mean rating was 11/10

Most common dog breeds

This chart gives you a full clarification of the most common dog breeds in master dataset we analyzed as most common breed is Golden Retriever followed by another breed with each breed count

Account Performance over time

Apparently as we can see from this chart that the account popularity and performance is highly increasing over time as the blue line represents the favorite count and the orange line represents the retweet count
